GAME CHANGER

The BMFL™ - Bright Multi-Functional Luminaire - the game changer in the world of moving lights, has another trick up it's sleeve - four fast shutter blades with smooth and precise movement in the new BMFL™ Blade lighting fixture. Four fast shutter blades with smooth and precise movement in the new BMFL™ Blade lighting fixture. Individually angled and positioned within a frame - which itself can rotate through 90 degrees, providing a sharp or soft, precisely repeatable, frame for the projected image. Producing a new series of fast-moving in-air effects through pre-programmed shape and movement sequences of the blades, gobo images can be trimmed or framed in a regular, triangular or trapezoid shape. Each pair of opposing blades can close to a complete blackout. Two gobo wheels - one rotating with six „SLOT&LOCK“ gobo positions plus another with 8 static gobos can be combined with the Animation wheel to create numerous dynamic projected effects. Add all this to the already acclaimed BMFL™ features including: exceptionally smooth linear dimming, imperceptible high definition colour mixing, full width beam, output in excess of 250.000 lux at 5 metres - and the Robe EMS™ (Electronic Motion Stabiliser) technology, enabling the BMFL™ to both move and stop faster and more precisely than any other fixture in its class - all this housed in a compact body profile weighing just 37.9 kgs.

Impressive Aerial and Graphic Effects

The BMFL™ Blade features one rotating gobo wheel with 6 gobos, one static gobo wheel with 8 gobos and two rotating prisms – one linear six-facet prism and the other a six-facet circular prism, both of which can be used for spectacular, detailed aerial effects and projection. Beautiful artistic animations and effects are possible to achieve thanks to the animation wheel and its combinations with rotating and static gobos.

Framing Shutters Module

Four fast, smooth moving, shutter blades are individually angled and positioned within a frame, which itself can rotate through 90 degrees. As well as providing a sharp or soft, precisely repeatable, frame for the projected image, the system produces a new series of fast moving in-air effects through pre-programmed blade shape and movement sequences.
